Plugin Shelf for REAPER

Appendix: Online activation and ReaPack

Emelowsky

Document version 1.0 (Plugin Shelf 3.7.8)

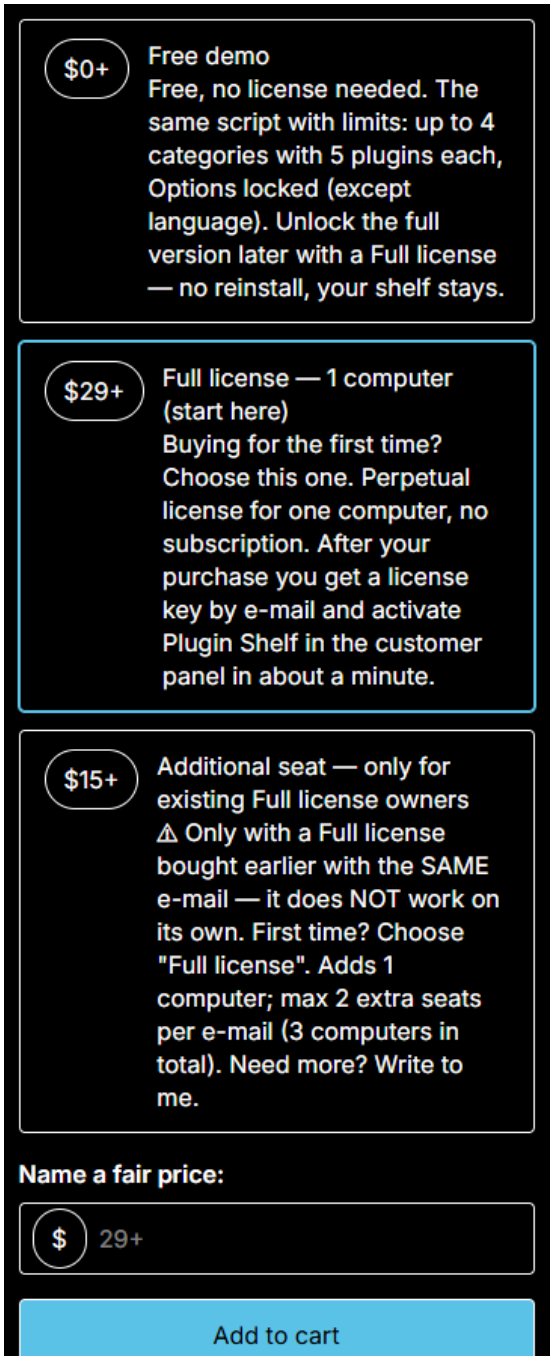

About this appendix

This appendix walks through the whole path from buying the Full license to an active Plugin Shelf, with screenshots from a real test purchase. E-mail addresses and keys in the pictures are replaced with examples (you@example.com, XXXX…), and the Machine ID is made up. The last part explains how installing with ReaPack differs from installing by hand – above all, that ReaPack uses a different folder.

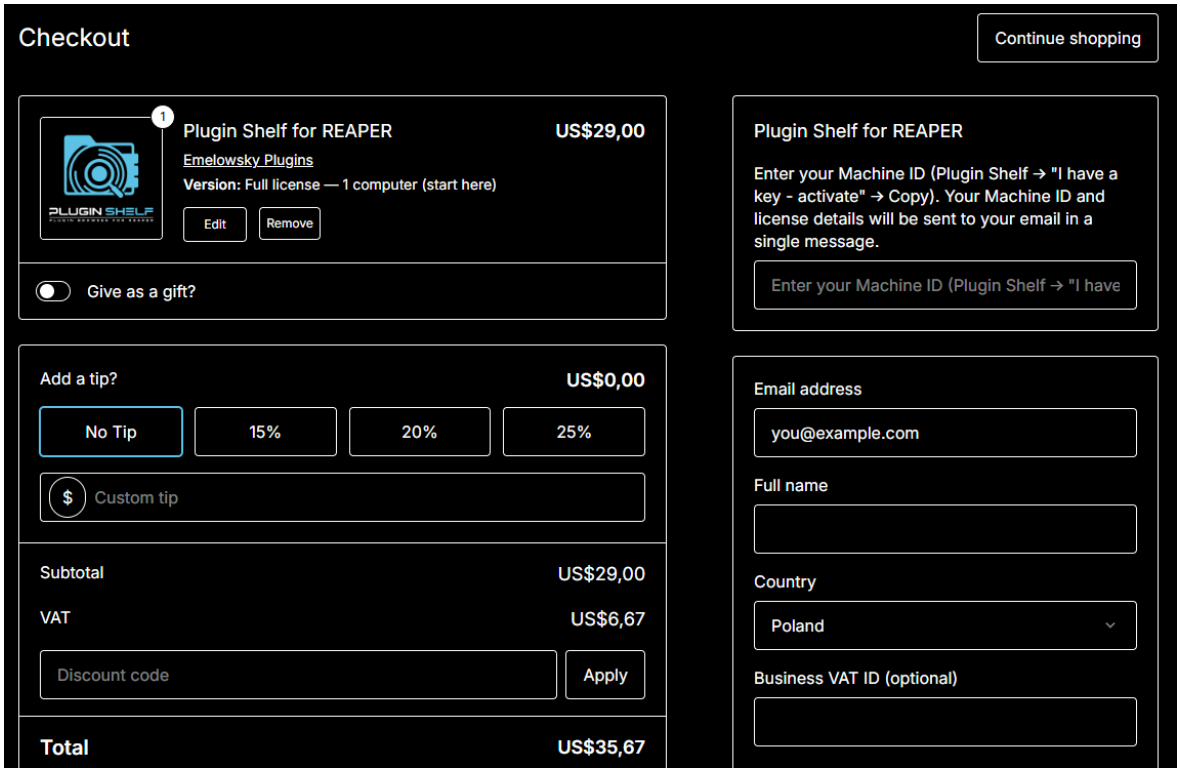

The activation screen itself is also described in chapter 2 of the main manual.

1. Buying the Full license on Gumroad

1. Open emelowsky.gumroad.com/l/plugin-shelf and choose “Full license — 1 computer (start here)”. The Free demo needs no purchase. “Additional seat” is only for people who already own a Full license bought with the same e-mail.

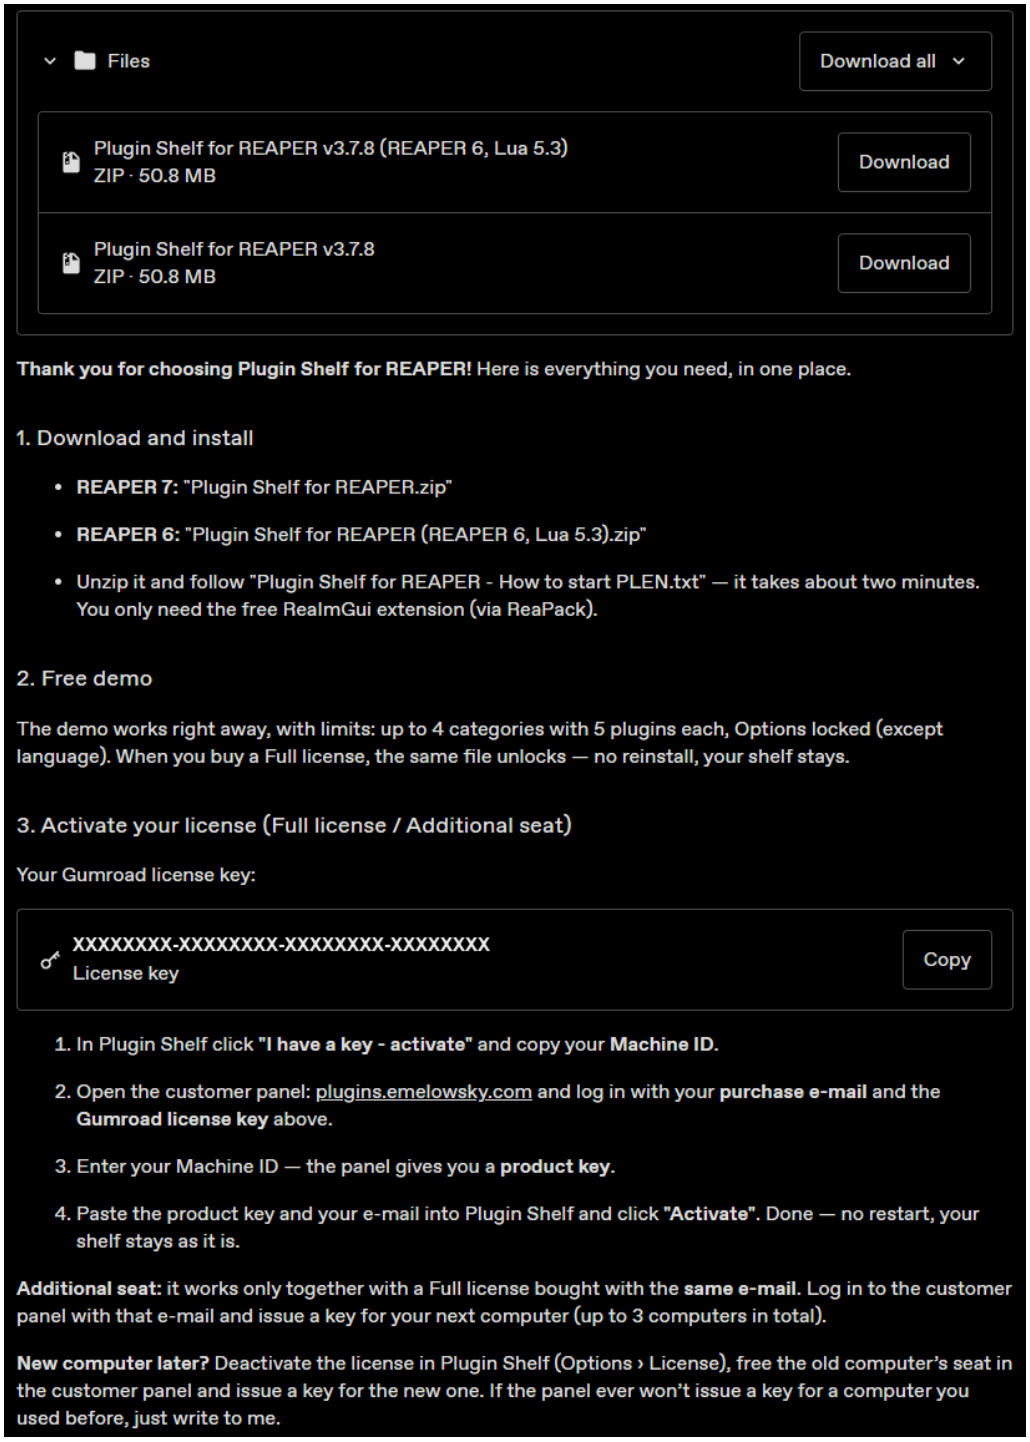

2. Click Add to cart. At checkout enter an e-mail address you can access – it becomes your login to the customer panel and is part of your license, so later you always use exactly this address.

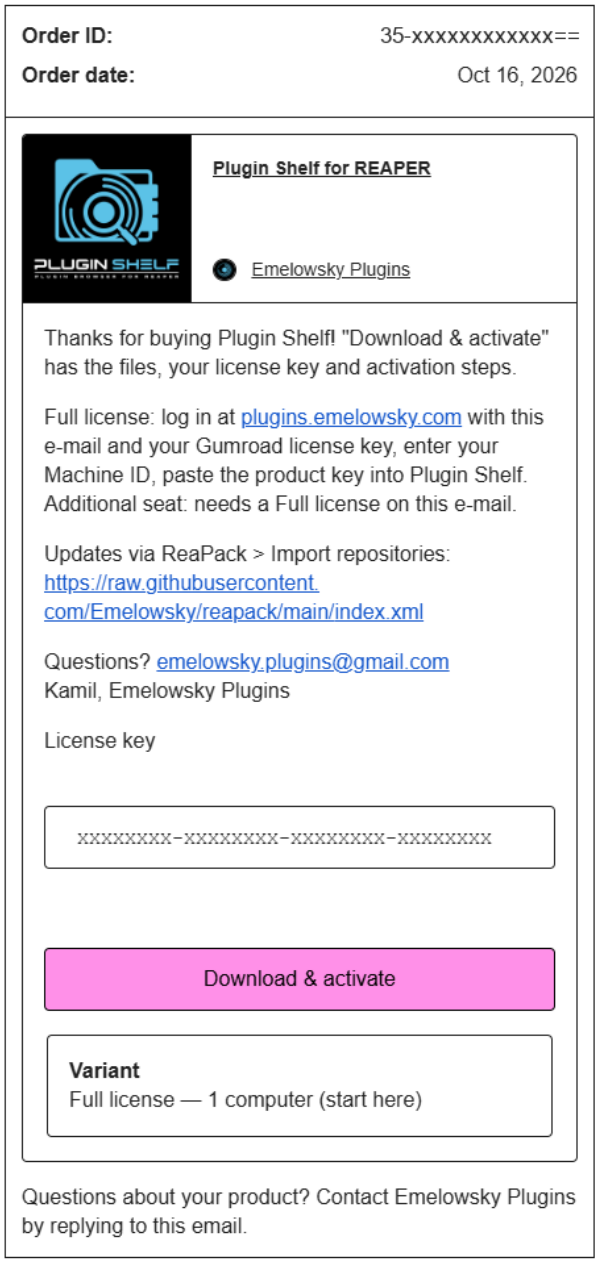

Tip: *the "Enter your Machine ID" field at checkout is optional. You can leave it empty and enter the Machine ID later in the customer panel, as shown below.*

3. Pay. Right after the payment Gumroad shows your purchase page: the downloads (the REAPER 7 zip and the "REAPER 6, Lua 5.3" zip), your Gumroad license key and the activation steps.

2. The e-mail from Gumroad

At the same time you get the e-mail "You got Plugin Shelf for REAPER!" (sender: Emelowsky Plugins, sent by Gumroad). It has the same Gumroad license key and a "Download & activate" button that brings you back to the purchase page. Keep this e-mail.

Order ID: 35-xxxxxxxxxxxx==
Order date: Oct 16, 2026

Plugin Shelf for REAPER

Emelowsky Plugins

Thanks for buying Plugin Shelf! "Download & activate" has the files, your license key and activation steps.

Full license: log in at plugins.emelowsky.com with this e-mail and your Gumroad license key, enter your Machine ID, paste the product key into Plugin Shelf. Additional seat: needs a Full license on this e-mail.

Updates via ReaPack > Import repositories: https://raw.githubusercontent.com/Emelowsky/reapack/main/index.xml

548 Market St, San Francisco, CA 94104-5401, USA

Powered by gumroad

Important: *the Gumroad license key is not the key you paste into Plugin Shelf. It is your login to the customer panel. The product key for Plugin Shelf is issued by the panel for the Machine ID of your computer (steps 3–4).*

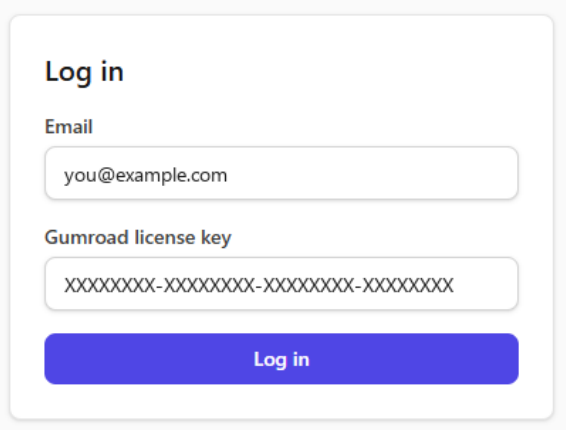

No e-mail? Check the spam and promotions folders. The purchase page is also in your Gumroad library if you create a Gumroad account with the same address. If it still isn't there, write to emelowsky.plugins@gmail.com.

3. Copy your Machine ID in Plugin Shelf

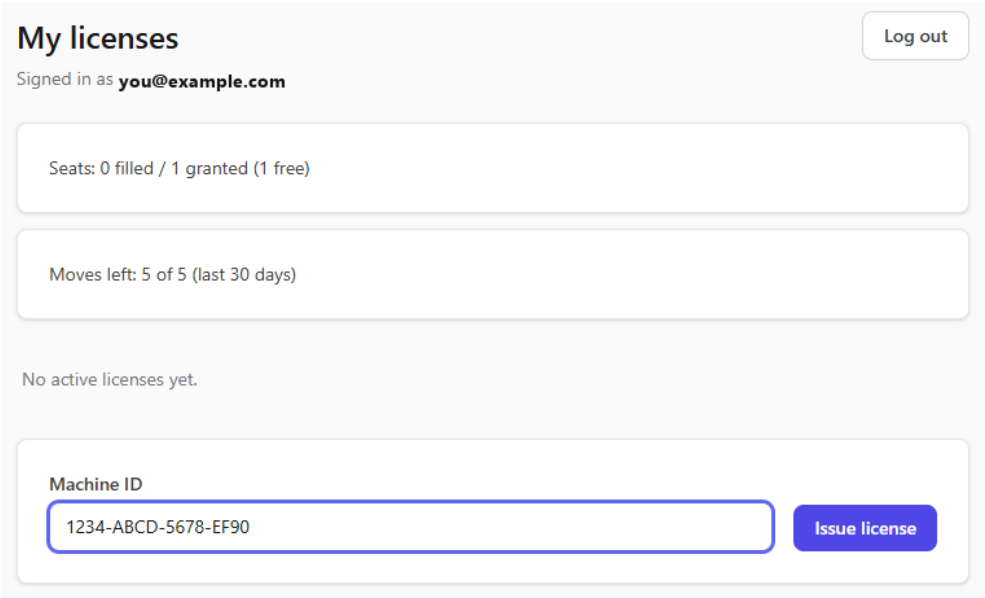

Start Plugin Shelf (it runs as the DEMO) and click "I have a key - activate" next to the DEMO VERSION banner. The activation screen shows the Machine ID of this computer (format XXXX-XXXX-XXXX-XXXX) – click Copy next to it. Leave the screen open; you come back to it in step 5.

4. Customer panel: issue the product key

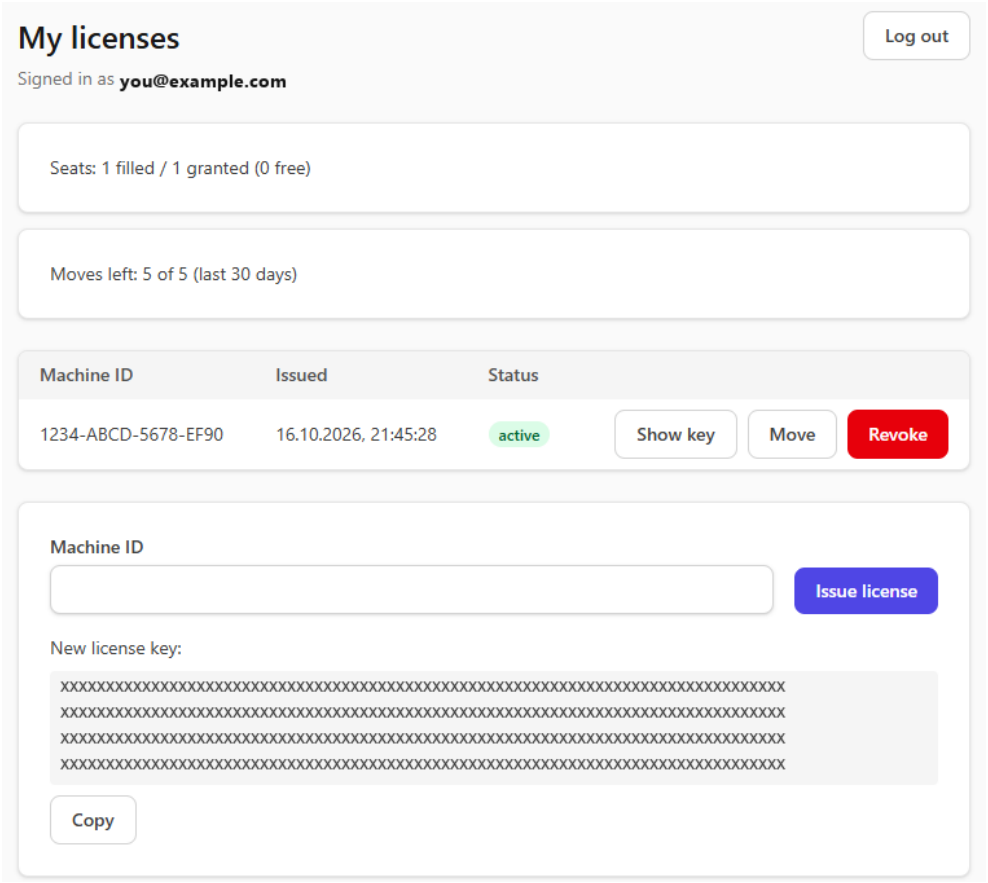

1. Open plugins.emelowsky.com (the “Open customer panel” button on the activation screen does the same) and log in with your purchase e-mail and the Gumroad license key.

2. The panel shows Seats (how many computers your purchases cover) and Moves left (transfers in the last 30 days). Paste your Machine ID into the Machine ID field and click Issue license.

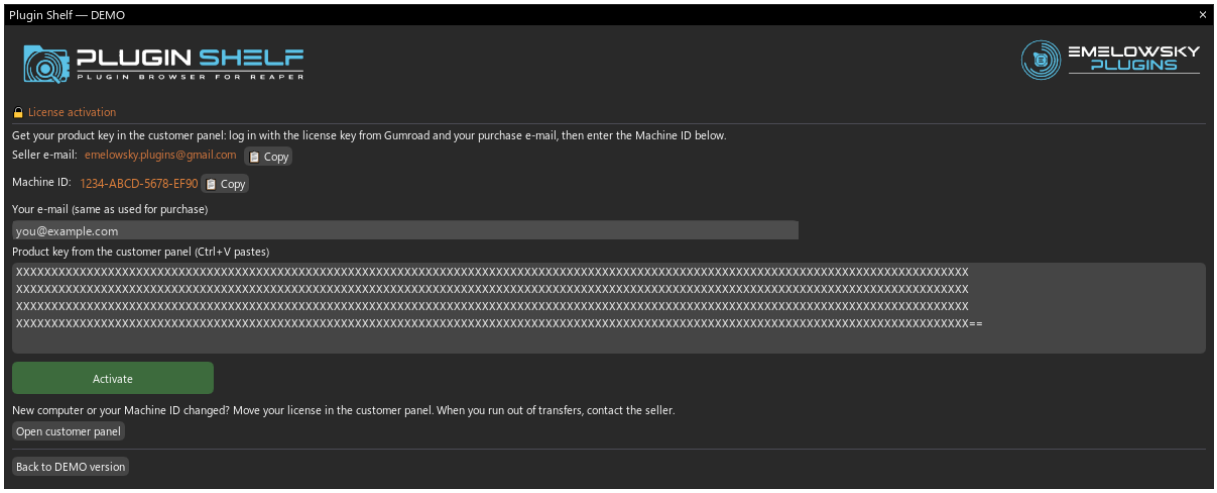

3. The panel shows the new license key – click Copy. The computer is now on the list with the status “active”. Show key displays the key again whenever you need it.

5. Activate in Plugin Shelf

Back on the activation screen: type your e-mail (exactly the one from the purchase), paste the product key (Ctrl+V) and click Activate.

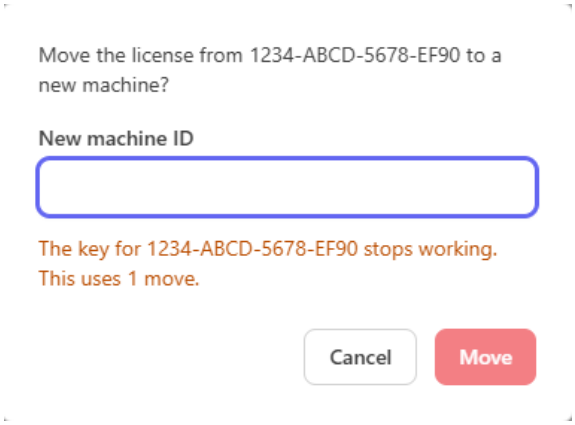

Plugin Shelf switches to the full version straight away – no restart, your shelf stays as it is. Options › License now shows “License active” and your e-mail. No internet or an unreachable server never stops Plugin Shelf from working and never deactivates your license.

6. New computer – moving the license

1. On the old computer (if you still can): Options › License › Deactivate license.
2. In the customer panel click Move next to the old computer, enter the Machine ID of the new one and confirm. The key of the old computer stops working; this uses 1 move.

3. Activate Plugin Shelf on the new computer as in step 5.

You have 5 moves per 30 days. Revoke frees a seat without issuing a new key. One e-mail can cover up to 3 computers: buy “Additional seat” with the same e-mail, then use Issue license for the next computer. If the panel won’t issue a key for a computer you used before, or you need more computers, write to emelowsky.plugins@gmail.com.

7. Installing with ReaPack – different folders

Instead of copying files from the zip you can install Plugin Shelf with ReaPack. Updates then arrive by themselves (Extensions › ReaPack › Synchronize packages).

1. Extensions › ReaPack › Import repositories… and paste:
   https://raw.githubusercontent.com/Emelowsky/reapack/main/index.xml
2. Extensions › ReaPack › Browse packages… › search for “Plugin Shelf” › tick “Emelowsky - Plugin Shelf for REAPER” and “Emelowsky - Plugin Shelf for REAPER (icon pack)” › Install › Apply.

	Manual install (zip)	**ReaPack**
Script folder	Scripts/Plugin Shelf for REAPER/	Scripts/Emelowsky/Plugin Shelf for REAPER/
Actions (Plugin Shelf, Override)	you load them yourself (Actions › New action › Load ReaScript)	added to the Action List automatically
Icons	unzip the icons zip into the script folder	the “(icon pack)” package
Updates	a new zip from Gumroad	Synchronize packages
REAPER 6 (Lua 5.3)	yes – the “REAPER 6, Lua 5.3” zip	no – REAPER 7 only

Scripts is inside the REAPER resource folder (REAPER: Options › Show REAPER resource path in explorer/finder).

Pick one way of installing. *The copy from the zip and the copy from ReaPack are two separate scripts with separate data – each has its own shelf. When you move to ReaPack, close Plugin Shelf and copy “user_plugins_3.x.lua” (your shelf) and your own icons “EmelowskyFX - … (custom).png” from Scripts/Plugin Shelf for REAPER/ to Scripts/Emelowsky/Plugin Shelf for REAPER/. Then point your toolbar buttons and shortcuts to the ReaPack actions and remove the old ones from the Action List.*

If Plugin Shelf asks for activation after the switch, activate it with the same e-mail and key (Show key in the customer panel) – on the same computer this doesn’t use a move.

Need help?

E-mail emelowsky.plugins@gmail.com – please add the diagnostic info from Options › About › “Copy diagnostic info”. Customer panel: plugins.emelowsky.com.
